

Residual waste (simple language)

Englisch

The black bin is for residual waste.

When waste is sorted, there is some left over. This is called residual waste. Or household waste. The residual waste goes in the black bin. In Switzerland, residual waste is burned. This produces electricity and heat. Sorting waste properly saves money.

What goes in the residual waste bin?

For example:

- » Vacuum cleaner bags, dust
- » Mineral cat litter
- » Cigarettes and ash (cold)
- » Hygiene products such as tissues, cosmetic wipes, cotton buds
- » Nappies and sanitary towels, incontinence products
- » Cleaning cloths, sponges
- » Cat faeces, dog faeces
- » Toothbrushes
- » Sausage skin, cheese rind, chewing gum
- » Till receipts

Things to remember:

- » Every household has to have a residual waste bin. You can find the costs online.
- » Put your bin out at the edge of the pavement by 6.00 a.m. on collection day.
- » The collection dates are shown in the waste calendar (paper version), online or in the waste app.
- » There are different bin sizes: 40, 60, 80, 120 or 240 l
