

Packaging – yellow bag (simple language)

Englisch

Only plastic, metal, and composite packaging may be placed in the yellow bag.

Composite materials are materials that consist of at least two different substances that cannot be separated, such as a milk carton. You can make new things from the packaging, such as watering cans and flower pots.

What goes in the yellow bag?

For example:

- » Cups, bottles, foils and bags made of plastic
- » Metal cans
- » Aluminium foil, aluminium trays
- » Milk cartons and drink cartons
- » Toothpaste tubes and other tubes made of plastic and metal

Things to remember:

- » The yellow bag is collected every 4 weeks.
- » Put your bin out at the edge of the pavement by 6.00 a.m. on collection day.
- » The collection dates are shown in the waste calendar (paper version), online or in the waste app.
- » You can also take your yellow bags to the recycling facility yourself.
